To whom it may concern,

Object: Endorsement of the Academy for Theranostics by the ICPO Foundation

On behalf of the Asociación Latinoamericana de Sociedades de Biología y Medicina Nuclear (ALASBIMN), we are pleased to provide our endorsement for the Academy for Theranostics developed by the ICPO Foundation (www.icpo.foundation).

In our view the Academy's curriculum uniquely covers a diverse array of subjects in the field of Radiomolecular Precision Oncology. Taught by world-class experts, the content includes in-depth presentations and discussions on oncological management of neuroendocrine tumors, prostate cancer, radiochemistry, medical imaging, radiobiology, medical physics and nursing & patients Relationships.

We strongly commend the Academy for its commitment to bringing access to high-quality education and training in these critical areas of nuclear medicine and Theranostics for the greatest number of healthcare professionals. The well-structured curriculum, which combines theoretical knowledge with clinically-sound cases and illustrations, provides a valuable resource for healthcare professionals seeking to enhance their expertise and stay updated with the latest advancements in the field.

We believe that the Academy for Theranostics will greatly benefit medical professionals, researchers, as well as residents and graduate students in the field of nuclear medicine and importantly allow them to receive an international certification for their training accomplishments. In this perspective the Academy's comprehensive approach aligns well with our mission to advance the multidisciplinary knowledge and application of innovative theranostics in precision oncology.

For all above reasons, we extend our full support and endorsement to the Academy for Theranostics by the ICPO Foundation and its commitment to providing high-quality education in nuclear medicine and Theranostics. Moreover, we applaud their efforts in bridging the gap between theory and clinical application, ultimately contributing to the growth of global patient access and improved care for cancer patients in Latin America and worldwide.

Dr. Gisela Estrada.
